

Proudly Using Medify Air

HEPA 13 Filtration Meets “CDC Patient Room Recommendation”

Medical Grade HEPA 13 is the superior filter that makes all the difference, creating safer environments for both patients and staff in treatment rooms and waiting areas.

What Matters?

An air purifier is a fan and motor that pulls the air in a room through a filter to produce cleaner air.

The Filter is the magic!

So is there a difference between:

- H13 Medical-Grade HEPA
- H11 True HEPA (most all air purifiers on Amazon)
- H8 ‘Like’ HEPA or HEPA ‘Style’

| | LINT | POLLEN | DUST | MOLD | DUST MITES | LEAD DUST | BACTERIA | PET DANDER | SMOKE | ALL BACTERIA | VIRUS CARRIERS |
|-----|------|--------|------|------|------------|-----------|----------|------------|-------|--------------|----------------|
| H13 | | | | | | | | | | | |
| H11 | | | | | | | | | | | |
| H8 | | | | | | | | | | | |

H11 captures particles down to 0.03 microns, H13 down to 0.01 microns.

Medify Air only uses H13 Medical-Grade Filters with our units.
